Gross capital as a percentage of shares and borrowings

The gross capital ratio measures the proportion that the Group's gross capital bears to the Group's liabilities to holders of shares and borrowings. The Group's gross capital consists of profits accumulated over many years in the form of general reserves together with other reserves, revaluation reserves, subordinated liabilities and subscribed capital which cannot be repaid in priority to ordinary investors. Capital provides a financial cushion against difficulties that might arise in the Group's business and, therefore, protects investors.

Liquid assets as a percentage of shares and borrowings

The liquid assets ratio measures the proportion that the Group's assets held in the form of cash, short term deposits and other securities bears to the Group's shares and borrowings. Liquid assets are generally readily realisable, enabling the Group to meet requests by investors for withdrawals from their accounts, to make new mortgage loans to borrowers and to fund its general business activities.

Profit for the year as a percentage of mean total assets

The profit/assets ratio measures the proportion that the Group's profit after taxation for the year bears to the average of the Group's total assets during the year. The Group needs to make sufficient profit each year in order to maintain its capital ratios at a suitable level to protect investors.

Management expenses as a percentage of mean total assets (cost to mean asset ratio)

The management expenses ratio measures the proportion that the Group's management expenses bear to the average of the Group's total assets during the year. Management expenses consist mainly of the costs of employing staff, running the Group's branches and offices, information technology costs, depreciation and amortisation. Expenses are controlled so that the Group operates as efficiently as possible while providing the service that members require.
